

Gripdeck Stadia Strips

Specification:

Type	Width	Finished depth	Weight
GD-S12	12mm	7.2 - 7.8mm	0.18kg/m
GD-S23	23mm	7.2 - 7.8mm	0.35kg/m

Cutting:

Strips should be cut with an angle grinder, using a metal cutting disc or diamond blade. We recommend the following PPE: Gloves, goggles, dust mask and ear defenders. Warning – sparks and heat may be generated during the grinding/cutting process, so ensure this process is carried out in a safe area away from flammable materials, liquids and gases. Allow the ends of the strips to cool before handling.

Fitting:

Strips should be fitted into a 6mm deep rebate, allowing the anti-slip aggregate to sit slightly proud of the surrounding surface. Bed the strips on an external grade adhesive such as Gripfill, ensuring that a bead is applied along the entire length of the strips. Secure strips with 3mm diameter x 20mm long stainless steel screws at 150-200mm centres. Strips should be fixed at a maximum of 25mm from the ends. Pre-drilling the strips may be necessary depending on the strength and grade of the screws.

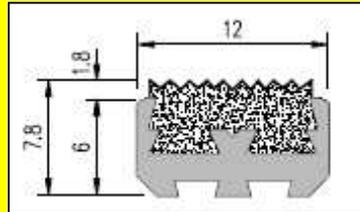

GripDeck

Gripdeck Stadia Strips

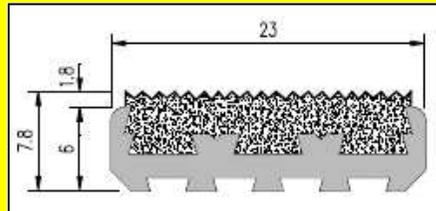

Profile name: Stadia Strip 23mm
Colour: Grey or Black (Others on request)
Thickness: 6mm
Width: 23mm
Slip resistance: Extremely Low Slip Potential
Lengths: 1200mm/2400mm

Profile name: Stadia Strip 12mm
Colour: Grey or Black (Others on request)
Thickness: 6mm
Width: 12mm
Slip resistance: Extremely Low Slip Potential
Lengths: 1200mm/2400mm

Finished to the usual high specification of all Gripdeck products these strips can be quickly and simply fitted across heavily staired areas. The strips are designed to fit into a 6mm deep rebate in concrete or timber, with the aggregate sitting slightly proud of the surrounding surfaces. This gives slip resistance without a trip hazard or underfoot discomfort to pedestrians. Our preformed strips are ideal for retro fitting to existing structures .
